

## Generally Accepted Cartridge and Chamber Names

When SAAMI was founded in 1926 at the request of the federal government, it was tasked with creating and publishing industry standards for safety, interchangeability, reliability and quality within the firearms and ammunition industry. Firearms should only be used with the ammunition designated by the firearm manufacturer for use in that firearm. Markings which indicate the appropriate ammunition to be used in a firearm are usually found on the firearm's barrel but may alternately appear on the frame or receiver. The discharge of ammunition which does not match the firearm markings can be dangerous and can result in serious injury or death to the user and/or bystanders, as well as damage to the firearm.

The best way to verify that you are using the correct ammunition is to check the head stamp on the ammunition to confirm that it matches the markings on the firearm.

Some types of ammunition, most notably rimfire and cartridges produced for military use, do not have cartridge markings on the head stamp of the case. In those instances, check the original ammunition packaging to determine its proper designation. If you have any doubt about the designation of the ammunition, you should not use it until you have it examined by a qualified person.

Remember – just because a round of ammunition can fit into a firearm's chamber, barrel, or action – this does not necessarily mean that it is safe to use that ammunition in that firearm. Again, *always* verify that the ammunition to be used matches the markings on the firearm.

Firearm and headstamp markings and other references to specific cartridges and chambers may utilize the full official name, or other approved abbreviated names, as listed in the SAAMI standards. In addition, there are some cartridges/chambers with equivalent/historical names found in common use. A listing of the most common examples of these equivalent/historical names is presented below.

**An Important Note About the Following Information:** The Equivalent or Historical Names information provided below is for *informational use only*. The cartridge names were compiled based upon research that has revealed several obsolete cartridge designations, discontinued names, or variations upon SAAMI-standard designations. Also included in this table are certain non-SAAMI standard cartridge designations where applicable. The names listed below represent the results of this research at the time

this table was created. This list is not exhaustive, and new information may be discovered which may cause this table to be amended from time to time. ***As such, the user of this table is reminded and warned that using ammunition in a chamber that is not marked for that specific ammunition may result in serious injury or death to the user and/or bystanders, as well as damage to the firearm.*** A user should always check the owner's manual or with the firearm manufacturer with questions about the safe compatibility of a cartridge for use in a particular firearm.

Equivalent / Historical Names		
SAAMI Full Name	SAAMI Abbreviated Name	Also Known As
22 Long Rifle	22 LR	22 Long Fur Bruchsen 22 IFB
