

TRANSPORT DATA SHEET

This is not an official document. It may be used for quick reference but is not intended to guarantee regulatory compliance.

PRODUCT OVERVIEW

Proper Shipping Name	Cartridges, small arms, blank		
Identification Number	UN0014	Hazard Class	1.4S
Mode of Transportation	International Air – Passenger and Cargo Aircraft		
Commodity	Blank small arms ammunition (shotshell, rimfire and centerfire) as 1.4S – 50 caliber / 8 gauge or less, no projectile; or above 50 Cal/8 gauge with an EX approval.		

Executive Summary

The package, overpack and Dangerous Goods Declaration (DGD) should appear like the images below. The UN number, proper shipping name, hazard label, consignor and consignee names and addresses, and net quantity should be located together, printed on or affixed to a single side or the top of the outer packaging.

Package Approach

Minimum Package Marking

Typical Pallet Overpack

Completing a Dangerous Goods Declaration (DGD)

Below is an example of how to complete the Dangerous Goods Declaration (DGD) for this scenario.

Dangerous Goods Identification				Quantity and Type of Packing	Packing Inst.	Authorization
UN or ID No.	Proper Shipping Name	Class or Division (subsidiary hazard)	Packing Group			
UN0014	Cartridges, small arms, blank	1.4S		30 Fiberboard Boxes X 19.6 kg, 1.9 kg NEM Overpack Used # 1 of 4 Total Net Qty 588 kg, 58 kg NEM 50 Fiberboard Boxes X 4.56 kg, 0.4 kg NEM OVERPACK USED x3, #2-4 Total Net Qty 228 kg, 20 kg NEM	130	These articles are of the kind described in 49 CFR § 173.56(h), and are authorized by USG-05 without documentation.

Reference the [Shipping Paper Requirements](#) section of this document for additional details.

175.75 ACCESSIBILITY RESTRICTION FOR U.S.A. AIR SHIPMENTS

The U.S.A. (and no other country) has a special 25 kg net limitation on the amount of hazardous materials allowed on an aircraft when loaded in an inaccessible manner. The requirement is applied to international air shipments by U.S. Variation 13 for shipments to, from, or transiting the U.S.A.

The requirement is triggered when the hazmat is not accessible to the crew, e.g., the compartments in the belly of a passenger aircraft, or after the first row in a cargo aircraft using freight containers. Theoretically it is helpful if a crew member could access the freight during flight to mitigate a burning or leaking package, e.g. use a fire extinguisher.

While the accessibility requirement applies to all aircraft, the requirement is difficult or impossible to meet for passenger aircraft. The U.S.A. has a robust cargo aircraft network, but this is not true of the world in general. Passenger aircraft is normally the only way to get to commercially remote destinations, via the national passenger airline, e.g. Malaysia Airlines to get to Malaysia, or Turkish Airlines to get to Turkey. It is often difficult to switch airlines once outside the U.S.A. due to chain-of-custody requirements of the U.S.A. export regulations. Therefore the accessibility requirement impedes trade with remote locations.

Certain hazardous materials are excepted from this requirement, e.g., LQ (UN 0012), blank ammo (UN 0014), and empty primed cartridges (UN 0055). To qualify, the packages should have the LQ mark in accordance with 49 C.F.R. § 173.63(b)(1)(i), even though the shipment is being sent as fully regulated 1.4S. Packages not meeting § 173.63(b)(2) limited quantity requirements are not eligible and should not have the LQ mark.

The LQ-Y mark is allowed for air shipments in the U.S.A., but is not recommended. The LQ-Y mark is prohibited for international air shipments of blank ammo, because LQ air is prohibited by international air for blank ammunition.

If an LQ-Y package is offered for international air transport, it could result in large fines. Instead, use the method in this transport data sheet for international air to make U.S. domestic air shipments.

The LQ surface mark is allowed for air transport in the U.S.A., and is allowed and ignored for international air. Some air carriers do not accept this, but all should accept the method in this TDS. The surface LQ mark should always appear on LQ blank ammo, and the LQ-Y mark should not be used.

TRANSPORT DATA SHEET

CARTRIDGES, SMALL ARMS, BLANK, 1.4S

Mode of Transportation: *International Air – Passenger and Cargo Aircraft*

This is not an official document. It may be used for quick reference but is not intended to guarantee regulatory compliance.

This method also allows the blank ammo to be shipped by ground as LQ before and after the air leg of multi-modal journeys. For these ground legs, enforcement in some jurisdictions previously did not allow voluntary application of the 1.4S label on LQ packages, so text was introduced into the UN and ADR specifically allowing LQ transport of packages marked with both the LQ mark and 1.4S label. See United Nations Model Regulations § 3.4.8.1; ADR § 3.4.8.1.

Citations: [49 C.F.R. §§ 173.63\(b\)\(1\)\(i\)](#), [173.63\(b\)\(2\)](#), [175.75\(c\)](#), [175.75\(d\)\(1\)](#), [175.75\(e\)\(1\)](#), [175.75\(f\)\(Note 1\)\(e\)](#).

CLASSIFICATION

Cartridges, small arms, blank, 50 caliber or less, may be self-classified by the manufacturer as UN0014, Cartridges, small arms, blank, Division 1.4S explosive per 49 C.F.R. § 173.56(h). No EX-approval is required. Carriers may think that an EX approval is required, so this transport data sheet shows a dangerous goods declaration that points them to USG-05, the U.S. variation that requires an EX approval for shipping explosives but excepts certain ammunition, including blank ammunition.

Citation: [49 CFR § 173.56\(h\)](#)

SEGREGATION

Dangerous goods are subject to segregation requirements at the package, overpack (e.g., pallet) and conveyance (e.g., aircraft) levels. Some goods may be packaged together in the same package, but this is often restricted by packaging testing requirements and should usually be avoided for explosives.

- Some dangerous goods may be overpacked together.
- Some dangerous goods which can't be overpacked together can be transported together.
- Some dangerous goods may not be transported together.

Below is the IATA Segregation of Packages Table 9.3.A.

IATA Table 9.3.A Segregation of Packages

TRANSPORT DATA SHEET

CARTRIDGES, SMALL ARMS, BLANK, 1.4S

Mode of Transportation: *International Air – Passenger and Cargo Aircraft*

This is not an official document. It may be used for quick reference but is not intended to guarantee regulatory compliance.

Packages

Do not pack other dangerous goods with blank ammunition.

Citation: IATA Section 6.

Overpacks

When consolidating two or more packages into an overpack, whether a pallet or another packaging, the shipper must ensure that the materials are in compliance with the Segregation of Packages Table 9.3.A listed above, and are permitted to travel aboard the same aircraft type.

Note 2 to Table 9.3.A states, “Divisions 1.4S and Classes 6, 7 and 9 (other than lithium batteries, see 9.3.2.1.3) are not included in Table 9.3.A as they do not require segregation from other classes of dangerous goods.”

Citation: IATA 9.3.2.2.5

Stowage in the Same Aircraft

See IATA 9.3.2.2.5.

Citation: Section 9.3.2.1.1; Table 9.3.A.

PACKAGING INFORMATION

Packing Instruction 130

1. Pursuant to the package weight limit in the Dangerous Goods List, the net quantity per package must not exceed 25 kg for passenger aircraft.

This instruction applies to explosives on passenger and cargo aircraft and Cargo Aircraft Only.

The General Packing Requirements of Subsection [5.0.2](#), [5.1.0](#) and [5.1.1](#) must be met.

Unless otherwise provided for in these Regulations, packagings must meet Packing Group II performance standards.

Inner packagings are not required.

Intermediate packagings are not required.

OUTER PACKAGINGS

Type	Drums						Boxes							
Desc.	Steel	Alu-min-ium	Plywood	Fibre	Plastic	Other metal	Steel	Alu-min-ium	Wood	Plywood	Reconstituted wood	Fibreboard	Plastic	Other metal
Spec.	1A1 1A2	1B1 1B2	1D	1G	1H1 1H2	1N1 1N2	4A	4B	4C1 4C2	4D	4F	4G	4H1 4H2	4N

2. In addition to meeting the requirements of Packing Instruction 130, packages must meet the limited quantity requirements of 49 C.F.R. § 173.63(b).
 - a. The following products may be shipped as a Limited Quantity:

TRANSPORT DATA SHEET

CARTRIDGES, SMALL ARMS, BLANK, 1.4S

Mode of Transportation: *International Air – Passenger and Cargo Aircraft*

This is not an official document. It may be used for quick reference but is not intended to guarantee regulatory compliance.

(ii) Cartridges, small arms, Cartridges, power device (used to project fastening devices), Cartridges for tools, blank, and Cases, cartridge empty with primer that may be shipped as a limited quantity are as follows:

- (A) Ammunition for rifle, pistol or shotgun;
- (B) Ammunition with inert projectiles or blank ammunition;
- (C) Ammunition having no tear gas, incendiary, or detonating explosive projectiles;
- (D) Ammunition not exceeding 12.7 mm (50 caliber or 0.5 inch) for rifle or pistol, cartridges or 8 gauge for shotshells;
- (E) Cartridges for tools, blank; and
- (F) Cases, cartridge, empty with primer.
- (G) Cartridges, power device (used to project fastening devices).

b. The following packaging requirements apply:

(2) Packaging for Cartridges, small arms, Cartridges for tools, blank, Cases, cartridge empty with primer, and eligible Cartridges, power device as limited quantity must be as follows:

- (i) Ammunition must be packed in inside boxes, or in partitions that fit snugly in the outside packaging, or in metal clips;
- (ii) Primers must be protected from accidental initiation;
- (iii) Inside boxes, partitions or metal clips must be packed in securely-closed strong outside packagings;
- (iv) Maximum gross weight is limited to 30 kg (66 pounds) per package; and
- (v) Cartridges for tools, blank, Cartridges, power devices which are used to project fastening devices, Cases, cartridge, empty with primer, and 22 caliber rim-fire cartridges may be packaged loose in strong outside packagings.

Special Provision A802

1. The package must be tested and certified not to leak under normal transport conditions at the PG II level.

A802 Notwithstanding the absence of a packing group in column E, substances and articles assigned to these entries must be packed in UN Specification packagings that meet packing group II performance standards. This does not apply when aerosols are prepared for transport in accordance with the limited quantity provisions or for lithium batteries prepared in accordance with Section IB of Packing Instructions [965](#) or [968](#).

This is not an official document. It may be used for quick reference but is not intended to guarantee regulatory compliance.

PACKAGE LABELING & MARKING

Below is a summary of the hazard communication requirements for the package.

Typical Package Marking

Generally, all marks and the 1.4S hazard label should be on one panel, except the ground LQ mark and package test certification. The top is often the best panel to use.

The marks must be at least 6mm (1/4") tall, or an appropriate size for packages which are ≤ 5 kg net.

Application of Labels & Marks

The following label(s) and/or mark(s) are required for this package. Labels and marks can be pre-printed or affixed as stickers. Stickers must not wrap around an edge and must be affixed relatively straight.

1. UN Number

A UN number, or United Nations identification number, is a four-digit code that identifies dangerous goods for transportation.

2. Proper Shipping Name

A proper shipping name (PSN) is a standardized name used to identify a dangerous good during transportation.

3. Consignor and consignee's name and address

The package must be marked with the consignor and consignee's name and address.

4. Net quantity

The net quantity of hazardous materials contained in the package must be marked on the package. Additionally, the net quantity must be "adjacent to" the UN number and PSN, in other words, on the same panel.

5. A specification package must be used with the package test certification mark affixed

Class 1 Explosives must meet the Packing Group II package testing requirements of [49 CFR 178 Subpart M – Testing of Non-Bulk Packagings and Packages](#).

6. 1.4S Hazard Label

The hazard label communicates the class and division, and for explosives, the compatibility group.

7. Surface Limited Quantity Mark

TRANSPORT DATA SHEET

CARTRIDGES, SMALL ARMS, BLANK, 1.4S

Mode of Transportation: *International Air – Passenger and Cargo Aircraft*

This is not an official document. It may be used for quick reference but is not intended to guarantee regulatory compliance.

This mark allows for Limited Quantity shipments via road for the road segments of the shipment, and serves as a stamp of approval that the package meets the requirements of 49 C.F.R. § 173.63(b) for the air segment.

Citation: IATA Section 7 – Marking & Labeling

OVERPACKS

An overpack is an enclosure that is used by a single consignor to provide protection or convenience in handling of a package or to consolidate two or more packages. Overpacks do not include a transport vehicle, freight container, or aircraft unit load device. Examples of overpacks are one or more packages:

1. Placed or stacked onto a load board such as a pallet and secured by strapping, stretch wrapping, or other suitable means; or
2. Placed in a protective packaging such as a box or crate.

Packages in an overpack must be prepared such that they could be compliantly transported without the overpack, including any required marks and hazard or handling labels.

When preparing an overpack:

- Overpacks must not be marked with a package test certification unless they are tested.
- The overpack must be marked “OVERPACK” when a package test certification mark is required on a package inside the overpack. This is not required if the hazard communication is visible at least once from the outside of the overpack.
- When the OVERPACK mark is required, also replicate the hazard communication on the overpack. EX numbers and package certification marks do not need to be replicated on overpacks.
- When required, the word OVERPACK shall be at least 12 mm (1/2”) high, preferably 1 inch tall.
- The border surrounding the word “OVERPACK” is optional. A piece of paper including the required overpack marks is often affixed to a pallet instead of an overpack sticker, and a border is not typically used for the word “OVERPACK.”
- If there is more than one UN number in an overpack, write each UN number and the total quantity of dangerous goods for each UN number.
- If there are two or more overpacks, name and mark each pallet with a unique identification mark (which may be in any alpha-numeric format) and the total quantity of dangerous goods, as indicated on the Dangerous Goods Declaration.

Example of the OVERPACK mark

TRANSPORT DATA SHEET

CARTRIDGES, SMALL ARMS, BLANK, 1.4S

Mode of Transportation: *International Air – Passenger and Cargo Aircraft*

This is not an official document. It may be used for quick reference but is not intended to guarantee regulatory compliance.

Since there is so much information required, shippers may find it more convenient to print “**OVERPACK**” on a piece of paper instead, with “**OVERPACK**” and the UN number at least ½” tall, and affix the paper to each pallet as described on the shipper’s declaration (see examples below).

Single overpack shipment label example

OVERPACK

TRANSPORT DATA SHEET

CARTRIDGES, SMALL ARMS, BLANK, 1.4S

Mode of Transportation: *International Air – Passenger and Cargo Aircraft*

This is not an official document. It may be used for quick reference but is not intended to guarantee regulatory compliance.

Nature & Quantity of Dangerous Goods

Sequence 1 – Dangerous Goods

Identification

1. The sequence is: “UN 0014, Cartridges, small arms, blank 1.4S”.
2. There is no packing group for this dangerous good.

Sequence 2 – Number and Type of

Packagings, Quantity of Dangerous Goods

1. The sequence is QUANTITY / PACKAGING MATERIAL & TYPE X NET QUANTITY / UNITS, e.g. “30 fiberboard boxes X 19.6 kg, 1.9 kg NEM”. Quantity is the number of shipping cases (packages). The degree of rounding is not specified, but may be to the nearest kilogram, and should be consistent between the DGD and the package and overpack markings. Packaging type is material and type, e.g. “fiberboard boxes” or “steel drums”. Do not abbreviate or use packaging type codes here. Metric units must be used, which for solids is lower case “kg”, not “KG”. For ammunition, net explosive mass (NEM) is the powder and primer mix; however the amount of primer mix is often only 1/100th of the powder and may be lost in the rounding.
2. For multiple products, each change to Sequence 2 must be on a different line, e.g. different net weight, but Sequence 1 does not have to be repeated if it is still valid. See IATA DGR Figure 8.1.K.

Sequence 3 – Packing Instructions

1. Write the number of the applicable packing instruction “130”.

Sequence 4 – Authorizations

1. Normally the EX number should be provided and the EX approval attached. However, this UN number

Dangerous Goods Declaration – Open Format

does not require EX approvals for 50 caliber/8 gauge and below. Instead, make a statement and cite USG-05, a U.S. government variation stating that they require EX numbers, but that blank small arms ammunition is excepted per 49 173.56(h), e.g. “These articles are of the kind described in 49 CFR § 173.56(h), and are authorized by USG-05 without documentation.”

Additional Handling Information & Authorization

1. The Shipper's Declaration for Dangerous Goods required by USG-12 must include an emergency response telephone number (including the area code and for telephone numbers for locations outside the US, the international access code or the “+” (plus) sign, country code and city code needed to complete the call from within the US) for use in the event of an incident involving the dangerous good(s). The number must be monitored at all times while the dangerous good is in transportation, including storage incident to transportation.
2. The name of the person signing the declaration is mandatory and must be entered on the declaration. This information may be printed or stamped.
 - a. If the Shipper's Declaration information is presented to the operator by means of EDP or EDI transmission techniques, the signature(s) may be electronic signature(s) or may be replaced by the name(s) (in capitals) of the person authorized to sign.
